

‘AGENTS’ proposal

dc-DC Nov.3, 1998

ad-hoc “agents” group

drafting committee: Priscilla Caplan,
Martin Dillon & David Bearman

presented by David Bearman

AGENTS PROPOSAL

- In dc 2.0, we should have one element for AGENT (perhaps called contributor) in place of Creator, Contributor, Publisher AND
- we should employ a maintained scheme (such as LC Relator, Interested Parties etc.) to assign values specific to the nature of the actions to enable operation/interoperation

Discussion

- Does not undo/de-stabilize dc1.0
- Will over time deprecate use of Publisher and Creator unless specifically intended to mean author and publisher of text resource
- Will enable, if we can find adequate schemes, the integration of metadata with precise operational implications (as in rights community, museum documentation,etc.)

Experience

- Each of the implementations reported yesterday had trouble with these elements; some only used one, others two, others wanted more qualifiers
- Instructors finding it difficult to clearly differentiate when to use which element
- Logical map shows close, but not precise, fit between the 3 and 3 concepts of ‘stuff’

Possible dc 2.0 item model
